# Welcome to Canela Software

## No Compromises

The most complete acuity system on the market is also the most affordable! Replace your aging projection systems with the ultra modern acuity testing system by Canela Software. You will find your new acuity testing system to be easy to use and powerful enough to tackle your day to day testing needs.

dual platform

Our technology runs on Macintosh and Windows based computers with feature parity. Get the tool thousands of private practices, researchers, universities, governments, and ophthalmic manufacturers use to accurately test refraction, astigmatism, binocular vision, contrast sensitivity, disparities, and more!

## Intuitive and Elegant Interface

Our users are a very diverse group, with a wide range of requirements. When working to meet those requirements, we always keep in mind precision, organization, and ease of use.

Our remote control is a perfect example of this mindset. The first time you pick up the remote, you can use it intuitively. Just press a chart button, and the chart appears. Press a VA size, and jump right to it. No need to struggle with modifier keys, or double functions per key – with clearly labelled and color-coded buttons, it's extremely easy to use.

## Tomorrow's Technology, Today

With its easy-to-use interface, comprehensive features, and rock-solid stability, 20/20 Vision is a great tool now – but it's also ready for the future. By harnessing the power of cloud technology, we are able to provide unique features and capabilities that are years ahead of their time. Get updates invisibly, right from the cloud over your network connection. New features are streamed directly to your computer, without any confusing disks or installation guides. Having an issue with your system? No problem! It can be fixed remotely, without frustrating and costly shipping delays.

# Power That Grows With You

Purchase at an affordable price and get key features at no additional cost!

## Software Remote

The Software Remote does everything the Mini Display does and more! Control the software wirelessly by way of touch screen devices. See what is on the acuity system in the palm of your hand.

The Software Remote connects to the acuity system via WiFi. Thus there are no range or line-of-sight issues that exist with infrared devices. Intuitively control every chart/test of your acuity system with a simple to use interface designed for touch!

\*Feature is software only. Hardware can be supplied for a fee upon request.

## Digital Refractor Integration

Acuity System integration with other tools in an office can save time and money. The digital refractor integration allows the acuity system to connect to digital refractor control panels. All commands that would normally be sent to projectors are now sent to the acuity system. Combine the power of the acuity system with the convenience of the digital refractor and have it all!

Compatible with TopCon, Huvitz, Reichert, and Haag Streit. Marco integration is planned for a future release.

## Advanced Contrast/Stereo Testing

The Advanced Contrast Sensitivity module allows testing with all optotypes in all display modes. Calibrated contrast will create accurate results for research level testing.

The Advanced Stereo Vision module allows for highest resolution random dot tests on the market. Users will be able to make charts using their own fixation images with full control over range of seconds of arc.

# More About Our Features

---

## Precision Vision Patti Pics

Studies have shown that the Patti Pics provide the best approximation of Sloan letter acuity, as well as the best sensitivity to visual pathologies, of any available pediatric optotype. The Patti Pics optotype integrates fully with the software, and provides a beautiful and accurate alternative to older, outdated pediatric optotypes.

## EyeMotion 3D Patient Education

The EyeMotion Patient Education system provides your practice with the latest content at your fingertips. Improve your patients' awareness and understanding of important optometric and ophthalmic conditions. Introduce your patients to new procedures and market new opticianry products.

This amazing content is designed to increase patient satisfaction and awareness. Improved awareness will only improve the patient's ability to make better decisions on up-sells.

## Mini Display Software

The Mini Display Software shows exactly which optotypes are being displayed in large easy-to-read type. You can now see what the patient sees regardless of the VA size without having to turn around. Additionally, it shows representations of all the charts and tests, including near tests such as color plates and amsler grids. Now you can screen patients with the appropriate tests, right from the chair.

The Mini Display Software also presents slides, videos, and patient education content in beautiful, brilliant color, for increased ease of viewing.

\*Feature is software only. Hardware can be supplied for a fee upon request.
